史記天官書　原卷二十七

〖索隱〗案：天文有五官。官者，星官也。星座有尊卑，若人之官曹列位，故曰天官。〖正義〗張衡云：「文曜麗乎天，其動者有七，日月五星是也。日者，陽精之宗；月者，陰精之宗；五星，五行之精。衆星列布，體生於地，精成於天，列居錯峙，各有所屬，在野象物，在朝象官，在人象事。其以神著有五列焉，是有三十五名：一居中央，謂之北斗；四布於方各七，爲二十八舍；日月運行，曆示吉凶也。」

中宮㈠天極星，㈡其一明者，太一常居也；㈢旁三星三公，㈣或曰子屬。後句四星，㈤末大星正妃，㈥餘三星後宮之屬也。環之匡衛十二星，藩臣。皆曰紫宮。㈦

㈠〖索隱〗姚氏案：春秋元命包云「官之爲言宣也，宣氣立精爲神垣」。又文耀鉤曰「中宮大帝，其精北極星。含元出氣，流精生一也」。

㈡〖索隱〗案：爾雅「北極謂之北辰」。又春秋合誠圖云「北辰，其星五，在紫微中」。楊泉物理論云「北極，天之中，陽氣之北極也。極南爲太陽，極北爲太陰。日、月、五星行太陰則無光，行太陽則能照，故爲昏明寒暑之限極也」。

㈢〖索隱〗案：春秋合誠圖云「紫微，大帝室，太一之精也」。〖正義〗泰一，天帝之別名也。劉伯莊云「泰一，天神之最尊貴者也。」

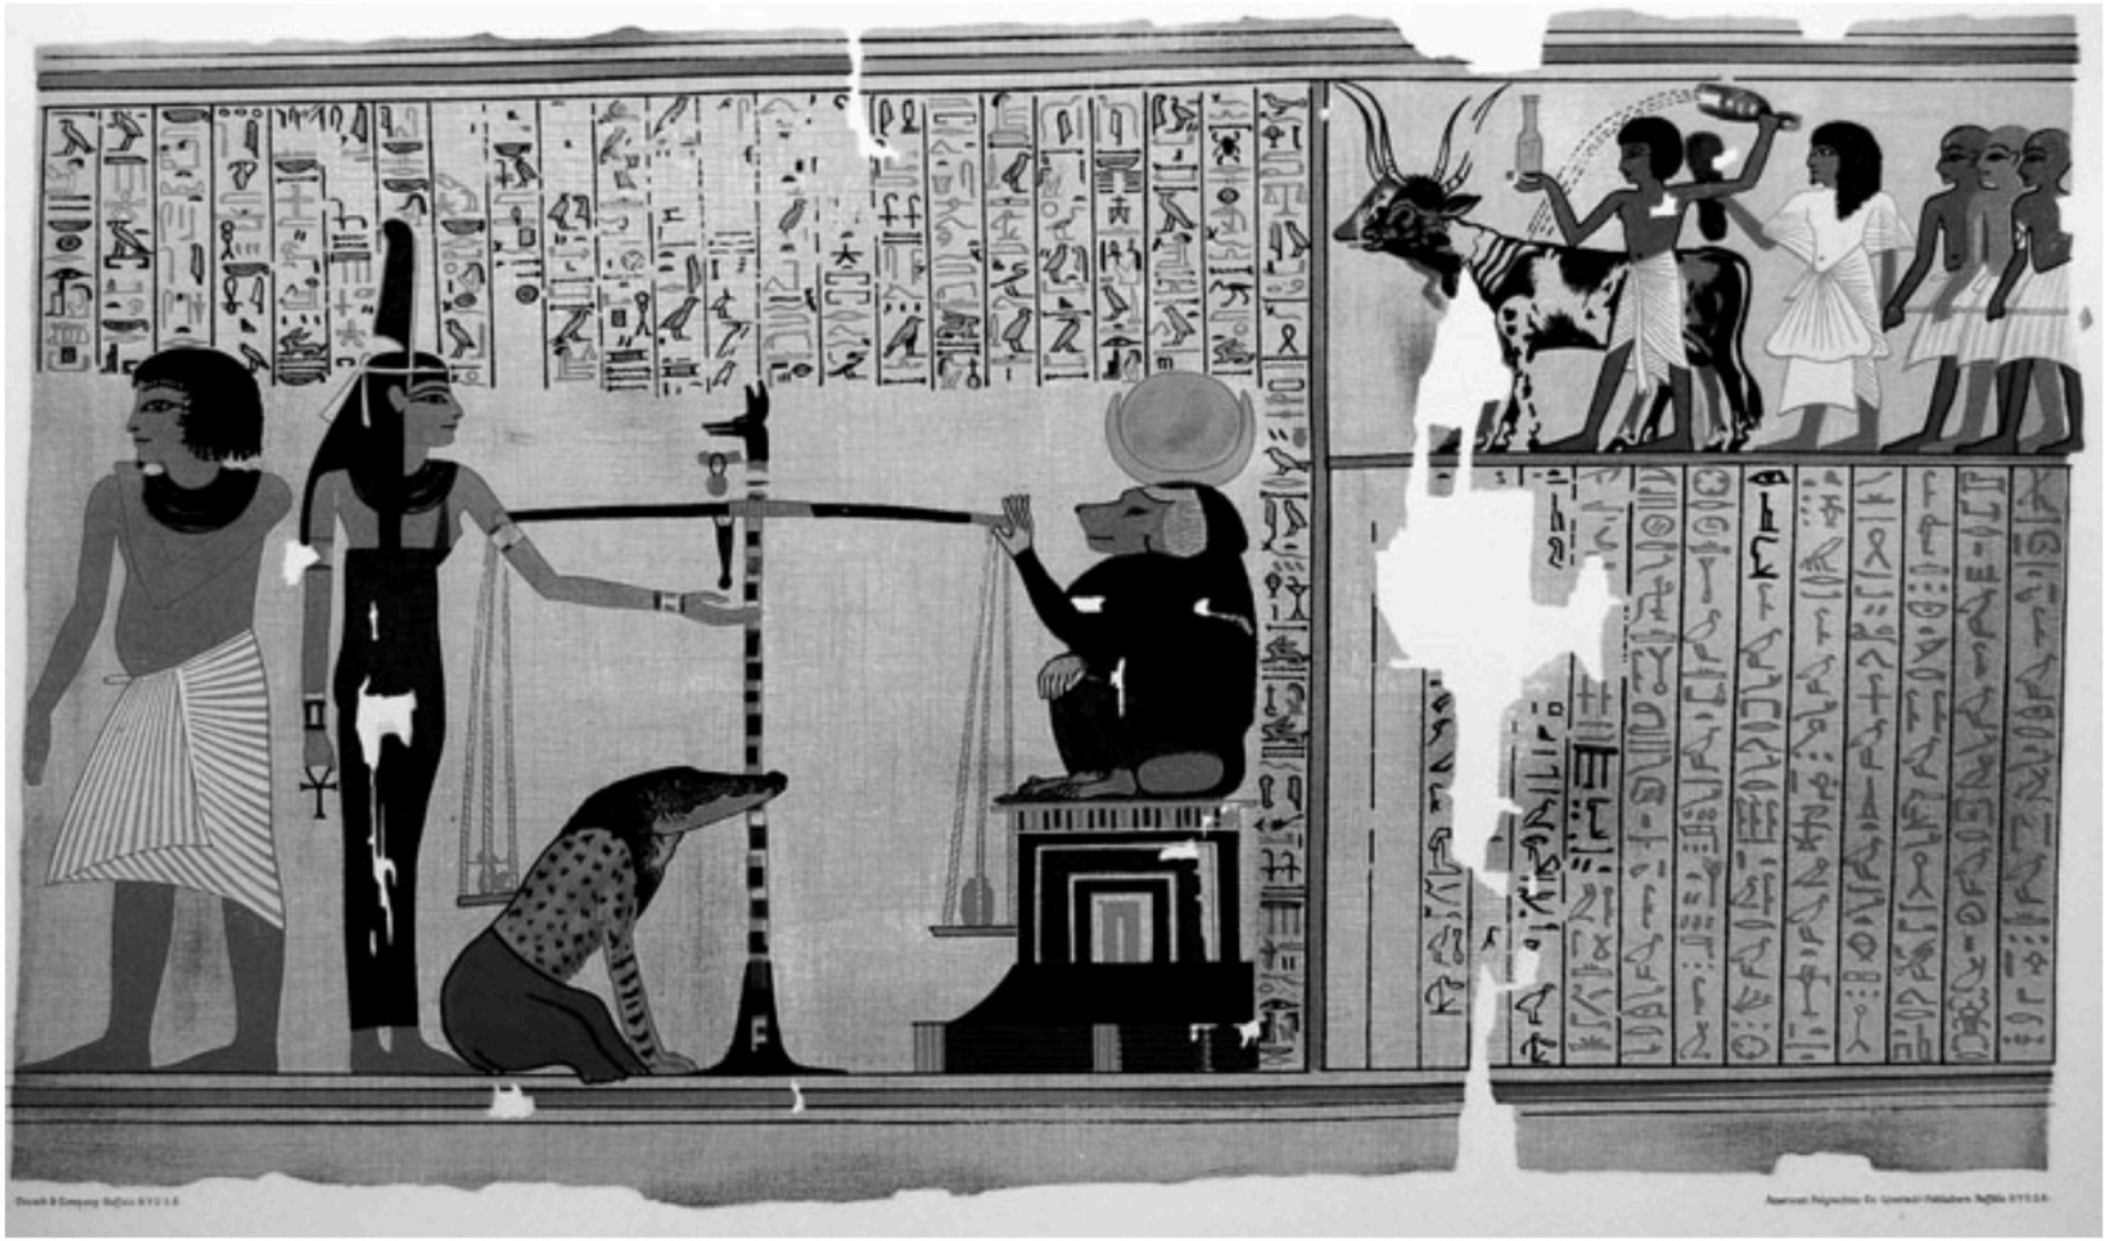

Figure 2.5. Chromolithograph of an Egyptian papyrus "Judgment of the Dead", from Binion's (1887) *Ancient Egypt or Mizraim*. 21 × 43.6 cm. Note the goddess of truth, Maat, presiding over the weighing of the heart of the deceased man on the left. Thoth, the god of wisdom and writing, is ready to record the outcome, and the "devourer" is waiting to destroy the heart if there is an unfavorable outcome. Being a lunar deity, Thoth has a Moon over his head. *See also* Color Section 1.

'GMT'	(Greenwich Mean Time): continuous with UTC; its use is deprecated for dates after 1972-01-01
'UT()'[1]	(Universal Time, with qualifier): for high-precision use of radio-signal distributions between 1955 and 1972; see Rots et al. (2015), Appendix A
'GPS'	(Global Positioning System): runs (approximately) synchronously with TAI; GPS ≈ TAI − 19 s
'TCG'	(Geocentric Coordinate Time): TT reduced to the geocenter, corrected for the relativistic effects of the Earth's rotation and gravitational potential; TCG runs faster than TT at a constant rate
'TCB'	(Barycentric Coordinate Time): derived from TCG by a four-dimensional transformation, taking into account the relativistic effects of the gravitational potential at the barycenter (relative to that on the rotating geoid) as well as velocity time-dilation variations due to the eccentricity of the Earth's orbit, thus ensuring consistency with fundamental physical constants; Irwin & Fukushima (1999) provide a time ephemeris
'TDB'	(Barycentric Dynamical Time): runs slower than TCB at a constant rate so as to remain approximately in step with TT; runs therefore quasi-synchronously with TT, except for the relativistic effects introduced by variations in the Earth's velocity relative to the barycenter. When referring to celestial observations, a pathlength correction to the barycenter may be needed, which requires the Time Reference Direction used in calculating the pathlength correction.
'LOCAL'	for simulation data and for free-running clocks.

- **fitsverify -l filename.fits** (list all header keywords when verifying each file)
- **fitsverify -q *.fits** (Verify all *.fits files in the current directory in 'quiet' mode. This suppresses the detailed verification report and only writes a 1-line pass/fail message for each file)
